## Release Notes

Pavement ME Deflection Data Analysis and  
Backcalculation Tool (Build 1.1.0)

*January 25<sup>th</sup> 2020*

## Features

1. Updated the Thickness Segmentation feature to allow the user to import thickness data with station distance values that do not need to match exactly as the deflection station distance values. Station distance units for both thickness data and deflection must be the same.
2. Updated the Segmentation feature to allow user to place the segment line anywhere between two stations, rather than snapping to the middle point between stations.
3. Allow empty/none thickness data point within a segment.
4. Fixed a compatibility issue with the exported .dgp file to work with Pavement ME Design v2.6.0.
